

Occipitofrontalis

Corrugator supercili

Buccinator + orbicularis oris

Orbicularis oculi

Depressor anguli oris

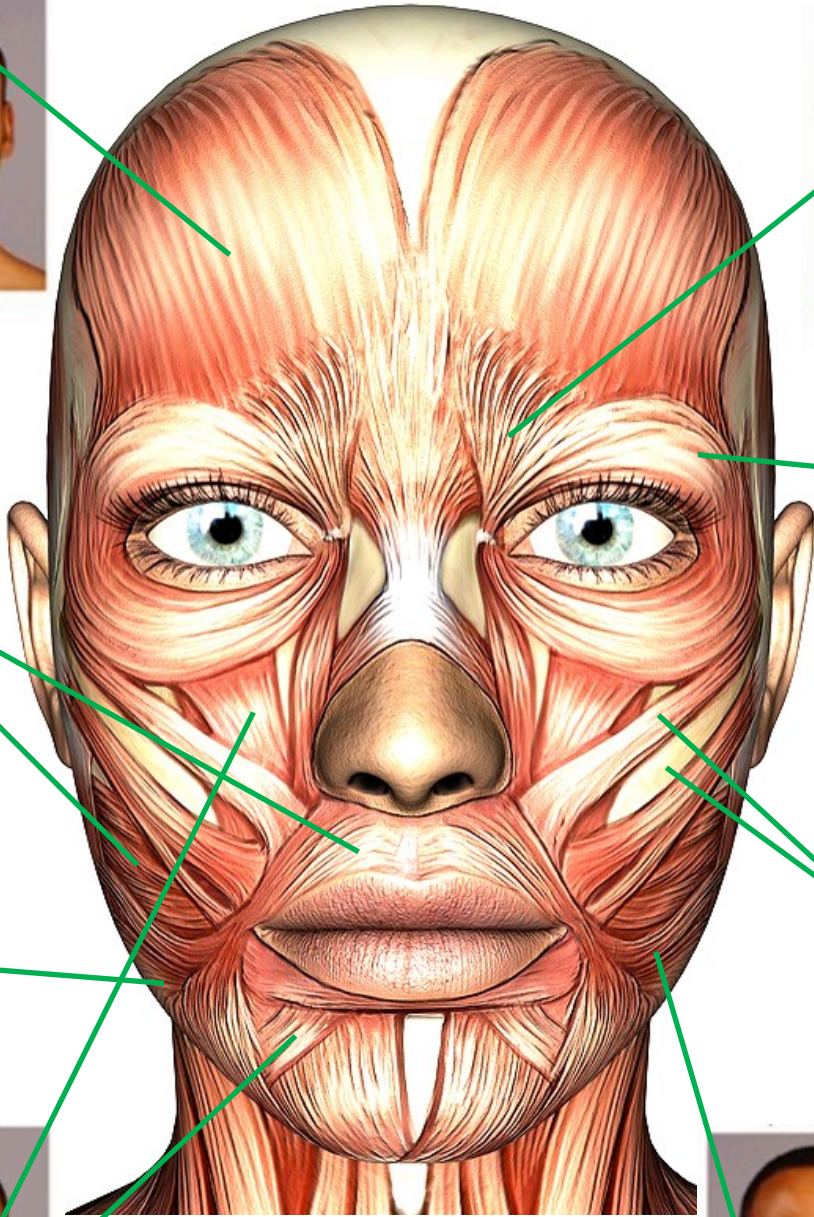

Zygomaticus major + minor

Levator labii superioris + depressor labii

Risorius

What Muscles Do You Use to Show Your Feelings?

There are LOTS of muscles in your face. They help you make lots of different facial expressions, which help to tell other people how you are feeling.

Look at yourself in the mirror. Make a face to see how it looks, then touch your face to see if you can feel what muscles you are using to make that expression.

Smile, frown, sneer, pout, look surprised, look angry, look tired. All these expressions use the muscles in your face.
